

Foot and Ankle Surgical Approaches with Diagnostic Ankle Arthroscopy

Date

1-2 April 2026

Course Fees

AED 4500+ 5% VAT

Course description

This Two-days course covers the most recent developments and cutting-edge techniques in foot and ankle conditions. They include common injuries, adult flat foot, Hallux valgus and joint arthritis. With just a few systematic and keynote lectures to spark discussions, the course is highly interactive, involving participants in case-based presentations. The focus of the course is on practical exercises on anatomical specimens where the participants will perform core surgical approaches and procedures

Target audience

Specialized orthopedic surgeons and senior trainees interested in advancing their expertise in the management of foot and ankle conditions

Learning objectives

Upon completion of this event, participants should be able to:

- Apply the principles to treat trauma of the foot and ankle.
- Describe the assessment tools for complex foot and ankle deformities.
- Prevent, identify, and treat complications and recognize long-term outcomes.
- Define appropriate treatment options for salvage of failed previous treatment.
- Perform core surgical approaches and procedures.

Program Overview
