

Solid lipid nanoparticles for management of acne

Rima ghadban, Nour kamal, Sara mostafa

Under Supervision of

Dr. Mohamed ali Haider

Highlights

- The application of solid lipid nanoparticles (SLNs) as a drug carrier system
- SLNs can be divided into 3 types on the basis of drug loading
- SLNs are prepared from lipid, emulsifier and water/solvent by using different methods
- In vivo skin permeation studies of SLN for use in acne
- NLCs modified to SLNs to improve stability and capacity loading the potential application of LNPs in drug delivery
